

## **NRPA**

- 1) What are the dimensions of the moorings? The application states that the breasting dolphins will measure 60 ft by 60ft; however, it also states that dolphins will be used as well. I assume that these are different from the breasting dolphins. What will their measurements be?
- 2) How many streams are located on the terminal site? 2 or 3?
- 3) The application states that one of these streams will impacted by a crossing that will be constructed along the entrance road, as a 72-foot culvert will be installed at this location. Is there an existing stream crossing here already? If not, the applicant will need to submit a separate Permit by Rule for a stream crossing.
- 4) How many streams are located within the pipeline ROW? The application states that no streams are anticipated to be impacted by the construction of the pipeline, as they will be crossed using the dry crossing method within a 24-48 hour period; however, it is not clear how many streams there are.
- 5) Approximately how many acres of temporary impact will occur between the limits of the 30-foot operational ROW and the 95-foot construction ROW?
- 6) How many acres of habitat conversion will occur from an existing forested state to a permanent scrub-shrub condition?.

## **Noise**

- 1) According to town regulations, what is this area zoned as per the town's regs? Is the applicant required to meet the standard of 60 dBA during the daytime hours and 50 dBA during the nighttime hours in accordance with DEP's regs based on zoning of the area?
- 2) Does the B.O.G. an acronym in the term BOG Compressors? If so, what does that stand for?
- 3) All of the information in the noise rules must be written in terms provided in the Noise Rules, found in Chapter 375 §10.

## **Visual**

- 1) There is a statement in the application that the applicant will choose the appropriate color, materials, texture and design elements to further reduce the

contrast with the surroundings. Please explain what these colors, materials, textures and design elements are and state how they help the project to blend in with the surroundings.

- 2) The application states that the mainline valve facility located near Brooks Street and Route 1 will have no views of the pipeline. Is this intersection located in Calais? If not, please state the correct town.
- 3) The application states that a total of 71 properties were identified within a 1.5 mile Area of Potential Effect (APE) established for cultural and historic resources that either were listed on the National Register of Historic Places (NRHP) or meet the criterion of potentially historic properties. This includes historic properties, buildings, structures, sites, and/or objects that meet a minimum 50-year age criterion. Are any of these areas affected by the view of the proposed project?

### **Buffers**

- 1) The application states that the proposed development will maintain as much vegetation as practicable on the land between Route 1 to within 50 feet of the facility's security fence and new trees will be planted where necessary. Is there a planting plan that goes along with all of this?
- 2) Will any trees be planted to screen the tanks from views from the St. Croix River? If yes, a planting plan must be included.

### **Water Supply**

- 1) The application states that the on-site well will supply a 10,000 gallon potable water tank, which will be used as back-up water to fill vaporizers during periodic regular maintenance. Furthermore, if necessary, water for this tank will be supplied by off-site locations. Please identify which off-site locations you are referring to. This issue also comes up with water supply for SCVs, Caustic system and building heating water, and fire protection water. Please identify all off-site water supplies.

### **Solid Waste**

- 1) Approximately how many cubic yards of stumps and grubblings will be generated?
